

# Remixing Penergetic K or P Ultra

**Penergetic P or K Ultra can be mixed up in advance, left in a bucket and then remixed later to create a creamy consistency of product ready to add to the spray tank.**

1. Remove lid and stir with a stick. Product having sat for 4+ weeks has set up, but remixes easily.

2. Premixed product quickly remixes into a creamy (paint-like) consistency.

3. The remixed batch becomes homogenous solution. [Can be mixed up to 3 months (or more) in advance.]

4. End product can now be diluted with water, in spray tank, to achieve desired field application rate.
