

CORN TRIAL - AGASSIZ, B.C.

Havested: Sept. 29, 2016

Planted: May 22nd Soil Temp. (when planted): 61 F

Treatment (Control Portion): Grower Standard Practice (GSP) [220 lbs./acre with 23-25-0]

Treatment (Penergetic Portion): GSP + 300 grams/ac penergetic k (with fertilizer) + 100 grams/ac penergetic p (seed treatment) + 100 grams/ac penergetic p (liquid) applied with Roundup at 5-6 leaf stage.

Analysis (based on 1,000th of acre sampling): cobs on Penergetic treated portion found to be (average) 26% heavier.

Note: Furthermore, when compared largest Control cob in sample to smallest Penergetic-treated cob in sample, Penergetic treated cob was still 13% heavier.
